

# A Healthy Stream

## What makes this stream a healthy habitat?

1. Cool, clean water
2. Streamside plants and trees to provide food and shade for stream dwellers
3. Pools to provide deep, slow-moving water for resting coho fry
4. Large fallen logs to create pools and trap gravel for spawning
5. Streambeds of clean gravel, cobble and boulders
6. Riffles of shallow water that increase oxygen for salmon eggs, fish and aquatic insects

### Can you spot...?

- Crayfish
- Great blue heron
- Coho fry
- Coho adult salmon
- Stonefly nymph
- Red-legged frog
- Dipper
- Raccoon
- Dragonfly
- Kingfisher
- Eagle
- Tailed frog
